

Clipboard Auto Typer v2.1 User Manual

A Windows desktop application for locally inserting copied clipboard text into Microsoft Word.

Application	Clipboard Auto Typer
Version	2.1.0
Platform	Windows 10/11
Language	Python 3.x
Primary Use	Copy text, then insert it into the active Microsoft Word document
Privacy	Offline only. Clipboard text is not saved or transmitted.

1. Program Overview

Clipboard Auto Typer monitors the Windows clipboard for newly copied text. When text is detected, it inserts that text into the active Microsoft Word document after a user-defined delay.

The application is designed for legitimate productivity, accessibility, and testing workflows. It should be used only where automation is allowed.

The app does not upload clipboard content, does not collect user data, and does not store copied text. It stores only non-sensitive preferences such as speed, delay, insertion mode, and tray behavior.

2. New in v2.1

Shortcut keys were added for starting, stopping, pausing, typing the current clipboard, and showing or hiding the application window.

Minimize-to-system-tray support was added. When enabled, minimizing the app removes it from the taskbar and keeps it available from the Windows tray icon.

The tray menu includes Show, Start Monitoring, Stop, Pause/Resume, Type Current Clipboard, and Exit commands.

Settings are saved between sessions. Clipboard text is still never saved.

A diagnostics script and beginner-friendly batch files were added.

3. Feature List

Continuous clipboard monitoring for new text.

Manual Type Current Clipboard command.

Microsoft Word detection and active-window checks.

Safe Insert mode for the best character-for-character preservation through Word COM automation.

Human Type mode for visible character-by-character entry at a selected CPS speed.

Slow, Normal, Fast, and Custom CPS speed controls.

Configurable delay before typing begins.

Pause, resume, stop, and emergency stop controls.

Latest-item queue while typing is already in progress.

Current clipboard preview and activity log.

System tray minimization and tray menu commands.

Windows executable packaging instructions using PyInstaller.

4. System Requirements

Windows 10 or Windows 11.

Python 3.10 or newer is recommended.

Microsoft Word installed and working.

An open Word document when typing begins.

Internet access is needed only once to install Python packages with pip. The application itself runs offline after installation.

5. Project Files

main.py - application entry point.

gui.py - Tkinter graphical interface, shortcuts, tray behavior, and activity log.

clipboard_manager.py - clipboard polling without clipboard mutation.

typer_engine.py - Word insertion and human typing engine.

word_detector.py - Windows and Microsoft Word readiness checks.

settings_manager.py - saved non-sensitive preferences.

diagnostics.py - beginner-friendly environment checks.

requirements.txt - Python dependencies.

install_dependencies.bat, run_app.bat, run_diagnostics.bat, build_exe.bat - beginner-friendly Windows scripts.

6. Installation Instructions

Beginner method:

Extract the ZIP file, open the Clipboard_Auto_Typer_v2 folder, and double-click install_dependencies.bat. After installation completes, double-click run_app.bat.

Manual terminal method:

```
py -m venv .venv
Set-ExecutionPolicy -Scope Process -ExecutionPolicy Bypass
.venv\Scripts\Activate.ps1
python -m pip install --upgrade pip
pip install -r requirements.txt
python main.py
```

PowerShell execution policy note:

If PowerShell says scripts are disabled, run this command in the current PowerShell window and then activate again:

```
Set-ExecutionPolicy -Scope Process -ExecutionPolicy Bypass
.venv\Scripts\Activate.ps1
```

7. How to Run the Application

The easiest way is to double-click run_app.bat. You can also run python main.py from an activated virtual environment.

```
.venv\Scripts\python.exe main.py
```

8. How to Use the GUI

Step	Action
1	Open Microsoft Word and open or create a document.
2	Click in the Word document where the copied text should be inserted.
3	Open Clipboard Auto Typer.
4	Choose a speed, delay, and insertion mode. Safe Insert is recommended for exactness.
5	Click Start Monitoring or press Ctrl+Shift+S.
6	Copy text from another source.
7	During the delay, click back into the target Word document if needed.
8	The app inserts the copied text into Word. Use Stop or Ctrl+Alt+Esc if you need to stop immediately.

9. Shortcut Keys

Action	Shortcut
--------	----------

Start monitoring	Ctrl+Shift+S
Stop monitoring and stop typing	Ctrl+Shift+X
Pause/resume typing	Ctrl+Shift+P
Type current clipboard	Ctrl+Shift+T
Show/hide app window	Ctrl+Shift+H
Emergency stop	Ctrl+Alt+Esc
Emergency stop while app window is focused	Esc

Global shortcuts may be blocked by some Windows security policies. If that happens, use the visible GUI buttons or local shortcuts while the app window is focused.

10. Minimize to System Tray

When the option "Minimize to system tray instead of taskbar" is enabled, pressing the minimize button withdraws the window from the taskbar and leaves a tray icon near the Windows clock.

To restore the window, choose Show Clipboard Auto Typer from the tray menu or press Ctrl+Shift+H. To close the app completely, use Exit in the tray menu or the app window.

11. Typing Speed and CPS

CPS means characters per second. A normal human typing speed is often around 3 to 5 CPS, while faster typists may reach 8 to 10+ CPS.

Slow mode uses 5 CPS, Normal uses 25 CPS, and Fast uses 60 CPS. Custom CPS can be set between 1 and 200. Safe Insert mode does not type slowly character by character; it inserts the text directly and is best for exact Unicode and line-break preservation.

12. Insertion Modes

Safe Insert: uses Word COM automation to insert text directly into the current Word selection. This is recommended for exactness, Unicode, symbols, emojis, line breaks, and long passages.

Human Type: uses Word typing commands character by character. This makes speed controls visible but can be affected by Word AutoCorrect or AutoFormat settings.

13. Test Examples

Example 1:

Hello World!
This is a clipboard typing test.

Example 2:

Numbers: 123456789
Symbols: @#\$%^&*()
Special characters: ä ö ü ñ

Example 3:

Paragraph one.

Paragraph two with spacing preserved.

After each test, compare the Word output to the original clipboard text. The text should match character-for-character, subject to the fonts and emoji support available in Microsoft Word.

14. Troubleshooting Guide

Problem	Fix
PowerShell blocks Activate.ps1	Run Set-ExecutionPolicy -Scope Process -ExecutionPolicy Bypass, then activate again

Word is not running	Open Microsoft Word and create or open a document.
Word is not active	Click inside the target Word document before the typing delay ends.
Clipboard is empty	Copy text first, then try again.
Tray icon does not appear	Run install_dependencies.bat again to install pystray and Pillow.
Global shortcuts do not work	Use the GUI buttons. Some Windows policies block global keyboard hooks.
Text changes unexpectedly	Use Safe Insert mode and check Word AutoCorrect settings.
App does not start	Run run_diagnostics.bat and check for missing dependencies.

15. Frequently Asked Questions

Does the app save my copied text?

No. Clipboard text is not written to disk. Only non-sensitive settings are saved.

Does it send clipboard data online?

No. The app has no network transmission feature.

Why should I use Safe Insert?

Safe Insert is generally the most reliable mode for exact text, Unicode, line breaks, symbols, and long content.

Why is there a delay before typing?

The delay gives you time to click inside the target Word document.

How do I stop safely?

Click Stop, press Ctrl+Shift+X, press Ctrl+Alt+Esc, or press Esc while the app window is focused.

How do I restore the app after minimizing?

Use the tray icon menu or press Ctrl+Shift+H.

16. Packaging into a Windows EXE

After installing dependencies, double-click build_exe.bat. The executable will be created in the dist folder.

Manual PyInstaller command:

```
.venv\Scripts\python.exe -m PyInstaller  
--noconfirm --clean --windowed --onefile  
--name "Clipboard Auto Typer" main.py
```

If the executable does not start on another PC, make sure that Microsoft Word is installed and that Windows security software has not blocked the newly built executable.

17. Safe Shutdown

To stop typing but keep the app open, click Stop or press Ctrl+Shift+X. To close the application completely, choose Exit in the app window or tray menu. If typing is in progress, the app asks before exiting.
